

O&O DiskImage 20 Professional protects your data from loss and cyber-attacks

Berlin, November 26, 2024

With the release of O&O DiskImage 20 Professional, O&O Software is setting a new standard for data backup solutions from Germany. In view of the rapidly increasing threat of Cybercrime, O&O Software emphasizes the urgent need for regular and comprehensive backups. The recently published report by the German Federal Office for Information Security (BSI) on the state of IT security shows that ransomware attacks in Germany cause billions of euros in damage every year - a problem that affects companies and private individuals alike and cannot be completely prevented even by the most modern anti-malware solutions.

O&O DiskImage 20 offers a powerful, user-friendly and reliable solution to back up valuable data and thus prevent possible loss due to cyber-attacks, hardware failures or other incidents.

Cyber Security and Data Backup: A must in the digital era

According to the current BSI report, ransomware attacks have increased significantly again in the past year. Small and medium-sized companies have increasingly become the target of such attacks, in which attackers encrypt data and demand a ransom. This often results in high recovery costs or data loss that cannot be recovered. However, the key to limiting damage lies in prevention: **regular backups of business-critical data.**

With O&O DiskImage, users can regularly back up their entire systems or selected data. The software not only enables the creation of images for a complete recovery, but also access to individual files - even from damaged backups.

New and improved functions in O&O DiskImage 20 Professional

The latest version of O&O DiskImage expands the existing range of functions again and offers numerous improvements:

- **Automatic backup plans:** Enables an easy and quick regular backup of entire Windows systems or just selected important data.
- **Improved fast recovery:** In an emergency, the data can be restored as quickly as possible either on the same machine or on new hardware - the corresponding drivers are automatically adapted and loaded.
- **Advanced encryption options:** By encrypting backups, they can be protected against unauthorized access. This also makes it possible to store sensitive data in the public cloud in accordance with legal requirements.

Data backup as protection against the consequences of cyber attacks

"The growing threat of cybercrime shows that data backup is no longer an optional addition, but an absolute necessity," says Olaf Kehrer, Managing Director of Berlin-based O&O Software GmbH.

"With O&O DiskImage 20 Professional, we offer a solution that enables everyone to protect themselves easily and effectively against the consequences of data loss - whether due to ransomware, hardware defects or application errors."

Simplicity meets professionalism

O&O DiskImage is aimed at companies and private individuals alike. It is so easy to use that even lay people can create a complete backup in just a few minutes. At the same time, it meets the requirements of IT professionals who want to implement comprehensive backup strategies.

Compatibility

O&O DiskImage 20 is fully compatible with the current Windows 11 and Windows 10 operating systems. Backups created with earlier versions of O&O DiskImage can still be used and restored. Using the included Windows start environment, backups can also be restored directly to systems regardless of hardware.

Pricing and Availability

O&O DiskImage Professional 20 including machine independent restoration (MIR) costs 49.95 USD, and for use on up to 5 PCs O&O offers 5 licenses for 69.95 USD. All prices include 19% VAT where applicable.

O&O DiskImage 20 Server Edition, optimized for use within companies, will be released shortly and will cost 299.00 USD.

Interested users can download a free 30-day trial version of O&O DiskImage 20 Professional Edition from the O&O website at <https://www.oo-software.com/oodiskimage/>.

About O&O Software

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
